Our Natural Impressions stock series is always expanding; please contact us at info@eagleriverdesigns.com for the current catalogue as well as pricing and customization information.

Cloudberry

Cloudberrys, or salmonberries, are a type of thornless raspberry and a botanical member of the rose family that grows low to the ground. The 3 to 4 inch-high plants consist of small, dark, heart-shaped leaves; white flowers give way to individual berries that turn from a dark reddish-orange color to a pale pink-orange color as they ripen. In Alaska the Inupiat mix the berries, called aqpiq, in with whipped fat and cooked fish or caviar for a rich, nourishing dish.

Metal: black

Globemallow

1.125" enamel pin

5 filled colors; 1 printed color
Metal: gold

Morel

Morels erupt from ashy soil in the first spring after wildfire. Their buried mycelium digests charred wood and recycles nutrients, often fruiting alongside early pioneers like lupine as the forest recovery gets underway. Where can you spot recent burns in Yosemite? Look for the lupine!

Beyond nature's own remarkable recovery, this vital cycle is actively supported by work made possible through the Yosemite Conservancy, including the restoration of culturally significant black oak groves through prescribed burns by a tribal stewardship crews. Learn how you can get involved and volunteer for projects in Yosemite at: yosemite.org
